# Connected and Protected

Simplicity combined with business-class security

Just as you wouldn't lock the front door and leave the windows open, you need to apply the appropriate security precautions to different areas of your business—or run an increased risk of attack. But multiple vendors, disparate bills, and a hodgepodge of services can complicate matters.

Simplify and consolidate with one experienced provider. Covad delivers business-class broadband and security solutions to help keep your office connected and protected.

**MANAGED FIREWALL.** Covad Managed Firewall service provides your first line of defense in protecting your business assets from external threats. By regulating all inbound and outbound traffic on your network, it controls what information gets in or out, and which applications can be accessed.

**MANAGED AND MONITORED.** Covad manages and monitors your firewall service from setup to configuration to ongoing changes. Your office receives a dedicated firewall appliance for optimal performance and your Internet connection is constantly monitored. If your connection goes down, we begin problem diagnosis and resolution automatically.

**REMOTE USER VPNs.** The Covad Remote User VPN securely connects mobile employees and telecommuters to your corporate network using their PCs and whatever broadband connections they have available—Wi-Fi, DSL, cable, even dial-up. Once the connection is established, their data travels through a secure, encrypted tunnel.

**DESKTOP PROTECTION.** Employee workstations are another entry point for viruses, spyware, phishing, and identity theft. Covad offers McAfee® Total Protection™ for Small Business software. It provides continuous, automatic protection that's always on and always up to date.

**COVAD MAKES IT EASY.** Choose Covad to help protect and secure your communications while providing reliable business-class broadband access. With one provider, one bill, and live 24x7x365 expert support, you can focus on what really matters—your business.
